

Technical Information

Hoyles Media Plate with supplements

Product Code: PM 1015

Application: - Recommended for the isolation and differentiation of Corynebacterium diphtheriae types

Composition**		
Ingredients	Gms / Litre	
Peptone	10.000	
HM peptone B#	10.000	
Sodium chloride	5.000	
Agar	15.000	
Laked blood	50.000 ml	
3.5% Potassium Tellurite Solution (MS2047)	10.000 ml	
Final pH (at 25°C)	7.8±0.2	
**Formula adjusted, standardized to suit performance parame	ters	
# - Equivalent to Beef extract		

Principle & Interpretation

The most common disease caused by *Corynebacterium diphtheriae* is diphtheria, an acute communicable disease manifested by both local infection of the upper respiratory tract and the systemic effects of the toxin, which are mostnotable in the heart and peripheral nerves (1). Hoyle Medium Base, formulated by Hoyle (2), is the modification of the original formulation of Neill, for the isolation and differentiation of *C. diphtheriae*. This medium is not inhibitory to some mitis types of *Corynebacterium*, as the original formulation.

Peptone and HM peptone B supply carbon, nitrogen substances, amino acids, vitamins and other essential growth nutrients. Potassium tellurite is a selective agent, which inhibits most of the normal flora of the upper respiratory tractexcept *Corynebacterium*. Hoyle's Medium is a highly selective medium and should be used in conjunction with a non- selective media such as Loeffler Serum Medium (DM1537) and Blood Agar Base (M089) with 10% horse blood (3). *C.diphtheriae* are usually present in small numbers permitting the formation of well isolated colonies. So, inoculation isdone by directly rubbing the swab over the entire surface of the medium. Incubation should be carried out till 72 hours if the results are negative. To study the morphology, gentian violet staining is done. To demonstrate the characteristicmorphology and staining reactions of *C.diphtheriae* by Neissers or Alberts method, it is advisable to use colonies from Loeffler Medium. The toxigenicity of *C.diphtheriae* strains can be determined by Eleks (4) method.

Type of specimen

Clinical samples - Nasal swab, Throat swab, wound swab

Specimen Collection and Handling

For clinical samples follow appropriate techniques for handling specimens as per established guidelines (3,5). Afteruse, contaminated materials must be sterilized by autoclaving before discarding.

Warning and Precautions

In Vitro diagnostic Use only. For professional use only. Read the label before opening the pack. Wear protective gloves/ protective clothing/eye protection/face protection. Follow good microbiological lab practices while handling specimensand culture. Standard precautions as per established guidelines should be followed while handling clinical specimens.Safety guidelines may be referred in individual safety data sheets.

Limitations :

- 1. Individual organisms differ in their growth requirement and may show variable growth patterns on the medium
- 2. Each lot of the medium has been tested for the organisms specified on the COA. It is recommended to users to validate the medium for any specific microorganism other than mentioned in the COA based on the user's unique requirement.
- 3. Further biochemical and serological tests must be carried out for confirmation .

Performance and Evaluation

Performance of the medium is expected when used as per the direction on the label within the expiry period when stored at recommended temperature .

Methodology

Either streak, inoculate or surface spread the test inoculum (50-100 CFU) aseptically on the plate.

Quality Control

Appearance Sterile Hoyles Media in 90 mm disposable plates with smooth surface and absence of black particles/cracks/bubbles . pH

7.60-8.00 **Quantity of medium** 25 ml of medium in 90 mm disposable plates

Colour of medium

Brownish red coloured medium

Sterility Test

Passes release criteria

Cultural Response

Cultural characteristics observed after an incubation at 35-37°C for 18-24 hours.

Oragnism	Inoculum (CFU)	Growth	Recovery	Colony Charactristics
C. diphtheriae type intermedius 14779	50-100	good-luxuriant	>=50%	grey colonies with darker centers
Corynebacterium diphtheriae type mitis	50-100	good-luxuriant	>=50%	grey colonies with shining surface
Escherichia coli ATCC25922 (00013*)	>=10 ³	inhibited	0%	
Enterococcus faecalis ATCC 29212 (00087*)	50-100	good-luxuriant	>=50%	black minute colonies

Key : *Corresponding WDCM numbers.

Storage and Shelf Life

• On receipt store between 20-30°C.

• Use before expiry date on the label.

Product performance is best if used within stated expiry period.

Disposal

User must ensure safe disposal by autoclaving and/or incineration of used or unusable preparations of this product. Follow established laboratory procedures in disposing of infectious materials and material that comes into contact with sample must be decontaminated and disposed of in accordance with current laboratory techniques (2,3).
