

### Technical Information

#### RPMI-1640

**With 2mM L-Glutamine, 4.5gms Glucose per liter, 10mM HEPES buffer and 2gms per liter Sodium bicarbonate Without Sodium pyruvate**

#### Product Code: AL1223A

**Application:-** Roswell Park Memorial Institute (RPMI) media are a series of media developed by Moore et al for the culture of human normal and neoplastic cells in vitro. RPMI-1640 is the most commonly used medium in the series. A modification of McCoy's 5A medium the medium was specifically designed to support the growth of human lymphoblastoid cells in suspension culture. Presently the medium is extensively used for a wide range of anchorage dependant cell lines. The medium needs to be supplemented with 5-20% fetal bovine serum. The medium is also known to support growth of cells in the absence of serum.

AL1223A is modified RPMI-1640 medium supplemented with L-glutamine, 4.5gms glucose, 10mM HEPES buffer and sodium bicarbonate. HEPES, a zwitterionic buffer having a pKa of 7.3 at 37°C prevents the initial rise in pH that tends to occur at the initiation of a culture and increases the buffering capacity of the medium. Users are advised to review the literature for recommendations regarding medium supplementation and physiological growth requirements specific for different cell lines.
