Principle and Interpretation

Complete Supplement Mixture w/o ADE is used as a dropout supplement for all strains of *Saccharomyces cerevisiae*. Complete Supplement Mixture (CSM) is composed of all the amino acids required for the vigorous growth of *Saccharomyces cerevisiae*. It also contains uracil. CSM w/o ADE does not contain adenine. This makes it a dropout growth medium for yeast cells. It can be mixed with yeast nitrogen base (YNB), ammonium sulphate and an appropriate carbon source (glucose/galactose/raffinose) to produce a media suitable for the growth of adenine prototrophs and wild type strains of *S. cerevisiae* but adenine auxotroph cannot grow in this media. Therefore, CSM w/o ADE can be used as drop-out formulation for the selection of auxotrophic requirements and transformants
