#### Methodology

Suspend 720 mg in 1000 ml distilled water. Sterilize by autoclaving at 10 lbs pressure (115°C) for 20 minutes. Mix well and dispense as desired.

#### Principle and Interpretation

Complete Supplement Mixture w/o HIS-TRP is used as a dropout supplement for all strains of *Saccharomyces cerevisiae*. Complete Supplement Mixture (CSM) is composed of all the amino acids required for the vigorous growth of *Saccharomyces cerevisiae*. It also contains uracil. CSM w/o HIS-TRP does not contain histidine and tryptophan. This makes it a double dropout growth medium for yeast cells. It can be mixed with yeast nitrogen base (YNB), ammonium sulphate and an appropriate carbon source (glucose/galactose/raffinose). A histidine and tryptophan auxotrophic yeast mutant strain cannot grow on this media but a wild-type or a histidine and tryptophan prototrophic yeast strain can grow.
