

Technical Information

Fluid Selenite Cystine Broth (Twin Pack)

Product Code: DM 25331

Application: - This medium is recommended as an enrichment medium for the isolation of Salmonellae from faeces, urine or other pathological materials.

Composition**

| Composition | | |
|--|-------------|--|
| Ingredients | Gms / Litre | |
| Part A | - | |
| Casein enzymic hydrolysate | 5.000 | |
| Lactose | 4.000 | |
| Disodium phosphate. 12H2O | 10.000 | |
| L-Cystine | 0.010 | |
| Part B | - | |
| Sodium hydrogen selenite | 4.000 | |
| Final pH (at 25°C) | 7.0±0.2 | |
| **Formula adjusted, standardized to suit perform | | |

Principle & Interpretation

Selective inhibitory effects of selenite was first resported by Klett ⁽¹⁾. Guth ⁽²⁾ used this study to isolate *Salmonella* serotype Typhi. Leifson studied effects of selenite and formulated a medium. Fluid Selenite Cystine Medium is a modification of Leifson's ⁽³⁾ formula with added cystine ⁽⁴⁾. The formulation corresponds to recommendations of AOAC ⁽⁵⁾ for the detection of Salmonellae in foodstuff, particularly egg products and included by APHA ^(6, 7), USP ⁽⁸⁾. This medium is recommended by ISO Committee ⁽⁹⁾ also as a selective enrichment medium for the detection of Salmonellae. 10 ml of culture from Buffered Peptone Water (DM1614S) is inoculated in Fluid Selenite Cystine Broth (DM2533I) and further sub-cultured on Brilliant Green Agar w/Phosphate (DM1971S).

Selenite Cystine Broth is useful to enhance the detection of low numbers of organisms from asymptomatic or convalescent patients (10) epidemiolosically and for detecting *Salmonella* in the nonacute stages of illness when organisms are scanty in the faeces. Casein enzymic hydrolysate provides nitrogenous substances. Lactose maintains the pH in medium as selenite is reduced by bacterial growth and alkali is produced. An increase in pH lessens the toxicity of the selenite and results in overgrowth of other bacteria. The acid produced by bacteria due to lactose fermentation serves to maintain a neutral pH. Phosphate maintains a stable pH and also lessens the toxicity of selenite. L-cystine improves recovery of Salmonellae. Enriched broth is subcultured on solid medium. Do not incubate the broth longer than 24 hours as inhibitory effect of selenite reduces after 6 - 12 hours of incubation (11).

Methodology

Suspend 4.0 grams of Part B in 1000 ml distilled water. Add 13.0 grams of dehydrated Part A medium. Warm to dissolve the medium completely. Distribute in sterile test tubes. Sterilize in a boiling water bath or in a free flowing steam for 10 minutes. DO NOT AUTOCLAVE. Excessive heating is detrimental. Discard the prepared medium if large amount of selenite is reduced. (Indicated by red precipitate at the bottom of tube/bottle.

Caution: Sodium hydrogen selenite (Sodium bi-selenite) is very toxic, corrosive agent and causes teratogenicity and hence should be handled with great care. Upon contact with skin, wash immediately with a lot of water.

Quality Control

Physical Appearance

Part A: Off-white to light yellow Part B: White to cream homogeneous free flowing powder

Colour and Clarity of Prepared medium

Light yellow clear to slightly opalescent solution

Reaction

Reaction of [(1.3% w/v) Part A and (0.4% w/v) Part B] at 25°C. pH: 7.0±0.2

pH range 6.80-7.20

Cultural Response/ characteristices

DM2533I Cultural characteristics observed after an incubation at 35 - 37°C for 18 - 24 hours when subcultured on MacConkey Agar (DM1081).

| Organism | Inoculum (CFU) | Recovery (increase in numbers) | Colour of colony |
|------------------------------------|----------------|--------------------------------|------------------|
| Escherichia coli ATCC 25922 | 50-100 | little-none | pink w/ bile ppt |
| Salmonella Choleraesuis ATCC 12011 | 50-100 | luxuriant | colourless |
| Salmonella Typhi ATCC 6539 | 50-100 | luxuriant | colourless |
| Salmonella Typhimurium ATCC 14028 | 50-100 | luxuriant | colourless |

Storage and Shelf Life

Dried Media: Store below 30°C in tightly closed container and use before expiry date as mentioned on the label.

Prepared Media: 2-8° in sealable plastic bags for 2-5 days.
