

Technical Information

Bile Peptone Transport Medium

Product Code: DM 1481

Application: - Bile Peptone Transport Medium is employed for the safe collection, transport and preservation of cholera organisms.

Composition**

Ingredients	Gms / Litre
Casein enzymic hydrolysate	10.000
Sodium chloride	10.000
Sodium taurocholate	5.000
Final pH (at 25°C)	8.5±0.2

**Formula adjusted, standardized to suit performance parameters

Principle & Interpretation

Vibrio cholerae is an etiological agent for epidemic and pandemic of cholera in humans. The organism is a non-halophilic *Vibrio* which cannot grow in media having a concentration of sodium chloride more than 5-6% best is able to grow in media without NaCl ⁽¹⁾. Cholera in human is associated with ingestion of contaminated water or food. *Vibrio* species, like many other gram-negative bacteria, grow in the presence of relatively high levels of bile salts. Bile Peptone Transport medium is a nutritive and selective holding medium for *Vibrio* species ⁽²⁾. It is used as a transport (holding) medium to maintain the viability of *V. cholerae* in stool specimens there is delay in transmission of a sample to the laboratory.

Casein enzymic hydrolysate serves as a source of carbon, nitrogen and essential nutrients. Add it on of sodium taurocholate makes the medium selective for *Vibrios*. Sodium chloride makes the medium selective for the growth of cholera organisms. High alkaline pH is tolerated by *Vibrios* while it is detrimental to most of the accompanying coliforms, therefore making the medium selective. Addition of potassium tellurite further improves the selectivity of the medium.

The sample should be transported immediately to the laboratory. However, if there is to be a delay of more than 6 hours, 1-3 ml of faeces should be added to 10-20 ml of Bile Peptone Transport Medium with tellurite ⁽²⁾.

Methodology

Suspend 25 grams of powder media in 1000 ml distilled water. Shake well & dispense into bottles. Sterilize by autoclaving at 15 lbs pressure (121°C) for 15 minutes. If desired, sterile potassium tellurite solution may be added after autoclaving to give a final concentration of 1 in 200,000 to make the medium more selective for *Vibrios*.

Quality Control

Physical Appearance

Cream to yellow homogeneous free flowing powder

Colour and Clarity of prepared medium

Yellow coloured, clear solution without any precipitate

Reaction

Reaction of 2.5% w/v aqueous solution at 25°C. pH : 8.5±0.2

pH Range 8.30-8.70

Dehydrated Culture Media
Bases / Media Supplements

Cultural Response/Characteristics

DM 1481: Cultural characteristics observed after an incubation at 35-37°C for 18-48 hours.

Organism	Inoculum (CFU)	Growth
<i>Vibrio cholerae</i> ATCC 15748	50-100	good-luxuriant
<i>Vibrio fluvialis</i> ATCC 33809	50-100	good-luxuriant
<i>Vibrio vulnificus</i> ATCC 29306	50-100	good-luxuriant

Storage and Shelf Life

Dried media: Store below 30°C in tightly closed container and use before expiry date as mentioned on the label.

Prepared Media: 2-8⁰ in sealable plastic bags for 2-5 days.
