Technical Information

MY 40 Agar (Osmophilic Agar)

Product Code: DM 1594

Application: MY 40 Agar (Osmophilic Agar) is used for detection and isolation of osmophilic microorganisms from food samples.

Composition**

**Formula adjusted, standardized to suit performance parameters

Principle & Interpretation

Osmophilic yeasts usually are responsible for the spoilage of food with high sugar content including jams, honey, concentrated fruit juices, chocolate candy with soft centres etc. (1, 2). Though osmophilic yeasts are of no public health significance, yet they are of economic importance to the food industry (2). A simple presence-absence test for detection of small numbers of osmotolerant yeasts in high-sugar foods is useful for enumeration. Osmophilic Agar (MY 40 Agar) is generally used for this purpose. Walker and Ayers (3) in their review have differentiated between osmophilic yeasts and osmoduric yeasts. Almost all of the known osmophilic yeasts are Saccharomyces species e.g. Saccharomyces rouxii, var. polymorphus, Saccharomyces mells etc. Improved recovery of osmophilic yeasts has been reported on media, which resemble the composition of the food under examination or contain high sugar concentrations (4).

Osmophilic Agar is recommended for cultivation of a wide variety of osmophilic organisms (5). MY in MY-40 Agar stands for malt extract and yeast extract and 40 for the 40% of sucrose in the medium, which meets the above requirements.

The medium contains malt extract and yeast extract which supply the nitrogenous nutrients, amino acids, vitamins, trace ingredients to the osmophilic yeasts. 40% sucrose in the medium satisfy the nutritional need of these yeasts.

Methodology

Suspend 44.5 grams of powder media in 100 ml distilled water. Shake well & heat to dissolve the medium completely. Sterilize by autoclaving at 15 lbs pressure (121°C) for 15 minutes. DO NOT OVERHEAT. Mix well and pour into sterile Petri plates.

Quality Control

Physical Appearance
Off-white to yellow homogeneous free flowing powder

Gelling
Firm, comparable with 2.0% agar gel.

Colour and Clarity of prepared medium
Medium amber coloured slightly opalescent gel forms in Petri plates

Cultural Response/ characteristics
DM 1594: Cultural characteristics observed after an incubation at 25-30°C for upto 1 week.
### Organism and Growth

<table>

</tr>
<tr>
<td>Pencillium notatum ATCC 10108</td>
<td>good-luxuriant</td>
</tr>
<tr>
<td>Saccharomyces rouxii ATCC 28253</td>
<td>good-luxuriant</td>
</tr>
</tbody>
</table>

### Storage and Shelf Life

**Dried Media:** Store below 30°C in tightly closed container and use before expiry date as mentioned on the label.

**Prepared Media:** 2-8°C in sealable plastic bags for 2-5 days.
